

## Day14-Practice Exercises

### 1. Creating a Basic Class and Object:

- Define a class Person with attributes name and age.
- Create a method introduce() that prints "Hello, my name is [name] and I am [age] years old."
- Create an instance of the Person class and call the introduce() method.

### 2. Using the \_\_init\_\_() Method and Modifying Object Properties:

- Create a class Book with attributes title and author.
- Initialize these attributes using the \_\_init\_\_() method.
- Create an object of the Book class and print its details.
- Modify the title attribute of the object and print the updated details.
